Reporting on beneficiary information in WFP's annual country reports

To produce estimates of the total number of unique beneficiaries WFP has assisted yearly, the data from all activities and transfer modalities must be adjusted to eliminate overlaps and add new beneficiaries.

The final estimated number of beneficiaries assisted in each country is validated by country offices and entered in COMET (the tool for programme design, implementation, monitoring and performance management) at the end of every year:

- the total number of beneficiaries, which is the sum of all direct beneficiaries reached under all country level activities and outputs, based on the adjusted totals that seek to eliminate overlap;
- the total number of beneficiaries receiving food transfers, cash-based transfers and commodity vouchers or capacity strengthening, the sum of all direct beneficiaries reached under the activities and outputs for each of these transfer modalities, based on the adjusted estimates that seek to eliminate overlap;
- the total number of beneficiaries assisted under outputs defined by country offices and specific to their operations;
- the total number of beneficiaries assisted under each programme area, the sum of all direct beneficiaries reached under WFP's eight programme areas at the country level;
- the number of schoolchildren assisted under school-based programmes, the sum of all participants assisted under the school-based programmes, adjusted to exclude overlaps and activity supporters such as teachers and cooks.

Although WFP conducts quality assurance to provide beneficiary data which are as accurate as possible, numerous challenges remain regarding data collection, verification, entry and processing. Beneficiary numbers in ACRs should be considered "best estimates", subject to over- and under- estimation.

Disclaimer for gender-disaggregated indicators

WFP introduced mandatory gender disaggregation for some Corporate Results Framework indicators in 2024. In such cases, gender-disaggregated data may not be available for 2023 values.

«No data» function in cross-cutting indicators

A new "No data" function has been introduced in the logframe module for reporting on cross-cutting indicators. This function ensures that no data fields in the ACR data tables remain empty without explanation. The "No data" function can be applied to cross-cutting indicators only at baseline, target, or follow-up levels. This function can be used for reporting an indicator at one level (baseline, target, or follow-up) or at two levels (baseline and follow-up). Country offices must choose either "Not collected" or "Not applicable" option.

A. **Not applicable**: used when data is not collected for **methodological note requirements**.

B. **Not collected**: used when data is not collected for **context-related reasons**.
